(54) Title: IN-SITU DETECTION AND ANALYSIS OF COAL BED METHANE FORMATIONS

(57) Abstract: A measuring system for in-situ measure-  
ments down a well by a spectrometer (4) is provided.  
The spectrometer (4) includes a radiation source (5) and  
a detector (6). A probe is optically connected to the  
spectrometer (4) and includes an optical pathway (7) for  
transmission of a radiation from the radiation source (5)  
and at least a second optical pathway for transmission of a  
characteristic radiation from a sample to the detector (6).  
A positioner is provided to position the probe near a side  
surface (11) of the borehole (3) and to optically couple the  
optical pathways to the side surface (11), where the probe  
is traversable up and down the well by way of a guide  
operatively connected to the probe and to a fixed location  
at the wellhead. By use of the apparatus and method a  
concentration of methane or other substance of interest is  
obtained, and thereby, a potential production of a coal bed  
methane formation is obtained.

\* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T"

later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X"

document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y"

document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&"

document member of the same patent family
